Michael Penhallegon

Week 2 Summary

Introduction

For week 2, the primary focus has been continued work on material from PH251.1x which is the R and Statistics course from the Edx series. I may need to adjust my timeline a little to better equate for the Jan 29th EDx course restart date.

Stats

This week my main work was completing one sets of excercises from Chapter 2, which is titled "Inference". of the book. I realize now it was not the only exercise set and so will need to work next week on the rest of the chapter. Due to being a review of statistics, almost all the work is done in R. I have written up all the exercises in a "R Notebook" and posted that as a http://howaboutudance.github.io/pubstatmeth/.

Overall, I completed excercises on pages 33-34. I am reading Chapter 4, which is where the content from the matrix algebra section of the book starts. I hope to start doing some of the work from that chapter starting next week.
